Tables of Resistance Tests

The attached tables indicate the resistance to a range of chemicals for ViterPaq EP.

The data has been compiled from laboratory tests (conducted at room temperature and 40°C), package trials and from drum coatings in everyday use. The maximum chemical resistance of these lacquers will be achieved only if the correct procedure for surface preparation, application and cure are adhered to. This information is given in the Product Information Sheet.

It is the responsibility of the user to be satisfied that the lacquer lined drum or container is suitable for the proposed cargo.

Please note that the term 'Test successful – discontinued' means that the tests were carried out for 9 or 12 months with all results satisfactory. The test was then discontinued.
