Capacity (Litres)	360
Construction Material	Steel
Height (mm)	1100
Depth (mm)	575
Width (mm)	1100

The SEPR8 is a heavy duty recycling unit designed for the collection and segregation of different waste streams. The SEPR8 is manufactured from 1.5mm zintec steel and makes recycling easy as it clearly indicates what is to be recycled in the bin and where to dispose of your waste.

The SEPR8 features divided sections for different waste streams which prevents cross contamination. The sections can be designated to hold recyclable items such as cans, paper, glass bottles, plastic bottles, mixed waste etc. Please select four waste streams from the drop down boxes above.

Each section of the bin contains a 90 litre capacity, galvanised steel liner which ensures the unit is clean to use as it collects all the waste deposited into the bin. To prevent the waste from being mixed, the liners are separated by a steel panel.

A hinged lid covers the aperture for each section and this eliminates waste spillage and keeps out unwanted vermin. The lids feature a pictogram depicting the recyclable material for each module.

For ease of emptying, the bin features two doors located on the front. The doors are fixed onto the unit using full length stainless steel piano hinges and are fitted with two security locks.

The units are available powder coated in a wide range of colours with black being the standard colour.

Dimensions:

Height: 1100mm

Width: 1100mm

Depth: 575mm

Capacity: 360 Litres (4x 90 Litre)
