Specification	
Capacity - Litres	300
Capacity - Gallons	65
Diameter - mm	780
Height - mm	1200
Construction Material	Polyethylene
Code	3P9000670DWT

## Description

The Helena amphora design brings a touch of ancient Greece to the garden. This water butt is realistically modelled on a Grecian urn, which gives the appearance of a real terracotta pot. The product features a smooth, fresh finish on one side and a more distressed antique finish on the other, showing the versatility of the water butt. With the generous 300 litre capacity, it is perfect for collecting and storing rainwater for activities such as watering plants and washing a car.

The water butt comes pre-drilled with x3 ¾" brass threaded ports, 2 of which can be used to connect a tap (brass tap included as standard) which gives easy access to fill watering cans or connect a hose pipe. The other threaded port can be used as drain down point to connect the optional 3P filter collector. This filter (at an additional cost) is everything you need for collecting water from your downpipe and filter any debris before transferring the water into the tank.

### Features

- Stylish Greek design
- Low maintenance
- Height: 1200mm
- Diameter: 780mm

### Included in the Kit

- Brass tap
- Child safety lid
- Wall bracket and screws
- Multi hole-saw set
