| Diameter - mm | 780 |
| Height - mm | 1200 |
| Construction Material | Polyethylene |
| Code | 3P900058KDWT |

Description

This water butt has a unique design and the appearance of a German Oak Tree. A highly realistic finish is obtained through a special weather proofing treatment of the PE; it's so realistic it's hard to separate from the original. The very impressive 475 Litres is perfect for collecting and storing large amounts of rainwater to be used for activities such as watering plants and washing a car.

This water butt comes pre-drilled with x2 ¾" BSP brass threaded ports. These can be used to connect the brass tap (included as standard) which gives access to fill watering cans or connect a hose pipe. The second brass threaded port can be used to connect the optional 3P filter collector. This filter (at an additional cost) is everything you need for collecting water from your downpipe and filter any debris before transferring the water into the tank.

Features

- Stylish design
- Low maintenance
- Height: 1200mm
